Limitations & Next Steps

Honest boundaries of this analysis

Research Question & Focus Area

What does active demand for Digital Marketing talent in Germany actually look like, in terms of employers, regions, seniority and required skills?

Why Digital Marketing

- A fast-evolving field where required tools and platforms shift constantly
- High posting volume, enough real data to support meaningful analysis
- Directly relevant to career planning within the DACH job market

Data Source & Scope

SOURCE

**Bundesagentur für
Arbeit
Jobsuche API**

Official public job-search API of
Germany's Federal Employment
Agency

GEOGRAPHIC SCOPE

Germany, nationwide

No regional restriction, all 16
Bundesländer included

TIME WINDOW

**Last 31 days
(Jul – Aug 2026)**

Filtered at query time via the API's own
recency parameter

COLLECTION METHOD

**10 targeted keywords
via REST API calls**

Paginated search + detail requests per
posting

Data Pipeline

Search API
(10 keywords)

Detail API
(per posting)

Clean & Deduplicate

Structure for Tableau

Search Keywords

Ten German-market search terms were used to capture the full breadth of Digital Marketing roles — from broad titles to specific disciplines.

Berlin

TOP CITY

adesta GmBH & Co. KG

TOP EMPLOYER

Top 10 Employers by Posting Volume

What this tells us

The top 10 employers combined post only 123 of the 1,899 total roles (about 6%). Staffing and recruitment agencies (DIS AG, Hays AG, FERCHAU) appear alongside direct employers, a sign that a meaningful share of demand flows through intermediaries.

Geographic Distribution

By Bundesland

By City

When Postings Go Live

Volume rises through the week, peaks on Thursday (389), and collapses on Saturday (35) — publishing activity is tightly bound to the standard business week.

PART 02

Skills & Seniority Profile

What employers ask for, and at what experience level

Requirements at a Glance

“Senior” leads among postings that state a level at all, but as the next slides show, most postings don't specify seniority explicitly.

Top 10 Hard Skills Requested

What this tells us

CRM and SEO lead almost neck-and-neck. Notably, general-purpose tools (Excel, CMS platforms) rank alongside specialist marketing platforms, Digital Marketing roles in Germany still expect broad, cross-functional tool fluency.

Top 10 Soft Skills Requested

What this tells us

Soft-skill mentions dwarf hard-skill mentions in volume. “Initiative” alone appears in more postings than the top hard skill (CRM), employers weight self-driven attitude very highly in this field.

Seniority Level Distribution

The bigger picture

Only 704 of 1,899 postings (37%) state a seniority level at all.

Among those that do, Senior roles dominate (447 — 63% of level-tagged postings), far ahead of Junior (164) and Middle (93).

This is a real gap for entry-level candidates: most listings simply don't signal the experience bar, making the market harder to navigate for Junior applicants.

Live Dashboard — Skills & Seniority Deep Dive

Key Findings

1 A fragmented market

The largest single employer accounts for under 1% of postings — hiring is spread across thousands of companies, not concentrated among a few big players.

2 A regional center of gravity

Nordrhein-Westfalen and Bavaria together account for over a third of all postings — demand tracks Germany's largest economic and population centers.

3 A business-week rhythm

Postings peak on Thursday and nearly disappear on Saturday — publishing activity is tightly bound to standard business operations.

4 Soft skills, loudly stated

“Initiative” is mentioned more often than any single hard skill — employers are as vocal about attitude as about tools.

5 An unclear entry point

63% of postings don't state a seniority level, and among those that do, Senior roles dominate — making it genuinely harder for Junior candidates to self-select.

Limitations & Future Work

- **Keyword-based collection introduces noise**

Short keywords like “SEA” matched unrelated postings (shipping, hospitality), a targeted exclusion list removed the clearest cases, but some ambiguity remains.

- **Seniority is often unstated**

Level could only be inferred from title/description text — the true seniority mix may differ from what's measurable here.

- **A 30-day snapshot**

Postings reflect one month (Jul–Aug 2026) seasonal hiring patterns are not visible in this window.

- **Location data has gaps**

43 postings had no specified city — likely fully remote roles or incomplete listings.

Next steps: expand the keyword list with synonym testing, track postings over a full quarter to capture seasonality, and cross-reference salary data where available.

Thank You !
